

BMRCL QR Ticket generation Process

1. Bangalore metro QR ticket will consist of two part, QR Static Block and QR Dynamic Block.
2. Static Block is sent as authorization.
3. Buyer Apps need to create a qr dynamic block, which is used to refresh generated qr code every 30seconds or as may be mandated by BMRCL from time to time.
4. QR Dynamic Block will have following parts
{QR_Update_Datetime|QR_Status|Latitude|Longitude|Operator_Specific_Data}

Where QR Update Datetime will be datetime since epoch in hex string

Generation date time in GMT format (21/04/2020@18:47:54) → represented as
seconds since epoch = 1,587,475,074 decimal = 5e9ef282 hex

For eg QR_Update_Datetime = 5e9ef282

For QR_Status you can give empty.

5. Join the QR static block received in authorization with the QR Dynamic Block generated using a # separator.
6. Generate the QR for this string which is generated.

Eg

Static QR Block: Authorization block received from ONDC:

Dynamic QR Block: To be generated by buyer apps periodically, the date time (in GMT) should not be older than 30sec or as per the time period specified by BMRCL from time to time.
